# OFFICESUITE UC<sup>®</sup>

## CONTROL EVERYTHING FROM ANYWHERE

### ONE UNIFIED COMMUNICATIONS SOLUTION FOR ALL YOUR NEEDS

OfficeSuite UC<sup>®</sup> is a feature-rich, 100% cloud-based unified communications platform that combines all your daily communications tools, such as calling, voicemail, email, instant messaging (IM), fax, conferencing, presence management and more, into one platform that is available from any place and any device.

now part of  
**windstream.** 

## IMPROVE PRODUCTIVITY & ENABLE MOBILITY

Give your company the flexibility it needs to be more productive. Make and receive calls, start conferences, send messages and see who is available to collaborate from absolutely anywhere using deskphones, mobile devices or laptops.

## ENSURE BUSINESS CONTINUITY

100% cloud-based communications mean you remain reachable to customers during disasters, even if your physical office is not open. It is the ultimate communications solution for business continuity planning.

## SAVE MONEY

OfficeSuite UC® is more cost-effective than traditional phone systems and disparate communications tools. You no longer need separate platforms and connections for voice, fax, chat and conferencing. They can all be managed in a common, easy-to-use user interface – all on one simple bill from one provider.

## SIMPLIFY IT MANAGEMENT

Manage your UC features through a single pane of glass with OfficeSuite UC®. Login to MyOfficeSuite to add new users, create profiles, adjust permissions and more. Even individual users can control all their features and settings, based on their set permissions, via the MyOfficeSuite portal, reducing dependencies on your IT Help Desk.

## MAINTAIN SECURITY

OfficeSuite UC® does not use SIP-based or Open Source technology. With our 100% cloud-based system, there is no longer anything physically on-site or on the phone itself that can fail, be tampered with, or that is accessible to others – unlike SIP technology which requires the intelligence and memory of the system to live in the phone itself, making it more vulnerable. And, all messages and calls made from mobile devices are encrypted as well.
